THE PROBLEM

Why it exists

Business files end up scattered across a drive, an email thread, and whatever the consumer line attached them to. Rutba Drive is one home for all of it, sharing permissions with the organization you already manage, so access is granted by role rather than by remembering who has the link.

FIT

Who it is for

- Teams sharing documents across departments
- Businesses consolidating scattered file storage
- Anyone who needs attachments and files in one place

APPS IN THIS PRODUCT

What you get

Drive

Folders, uploads, sharing, and version history in the browser.

Drive API

The storage service other products attach files through.

WHAT IT DOES

Capabilities

- Folders and files with real version history
- Sharing by person or role, plus view-only links that expire, can be revoked, and record each use
- Shared with me: every file shared with you, in one list
- Org-wide storage quotas, checked before a write, with each refusal recorded
- Large files uploaded in parts, so a dropped connection costs one part, not the file
- Download links that last five minutes and stop working once access is revoked
- Chat uploads, meeting recordings, signed agreements and documents stored here

COMMERCIAL

Worth knowing

The storage runs in production today, underneath Rutba Docs, Chat, Sign and the other apps that keep files: folders, versions, sharing, quotas and content, with a published SDK other products build against. What is not built is a Drive screen of its own, so for now you reach your files through the app that made them, and Drive is not sold on its own.

RUTBA SUITE

How it fits the rest of the suite

Rutba Suite is 23 products in three lines (the business suite, the workspace and the platform services underneath), sharing one customer list and one set of books. Buy the one you need today and add the rest later without a migration.
