From the bill of materials to the bench that builds it

Versioned bills of materials with work centres on every routing step, a regenerative MRP run that nets against real inventory and pegs plan to demand, and a shop-floor terminal that reports work in progress from the bench where it happens.

Family	Rutba Suite
Category	Manufacturing & MRP software
Status	Available
Apps included	5
From	\$15 per user / month
Requires	Rutba Inventory
Works with	Rutba Orders, Rutba Books, Rutba Facilities
Buy or trial	rutba.io/suites/manufacturing

THE PROBLEM

Why it exists

Production planning goes wrong when the plan, the stockroom and the floor are three different systems. Rutba Manufacturing runs one: an MRP run that reads today's stock and open orders, plans against pinned bill versions, produces buy and make orders you can firm in place, and hands the dispatch list to a tablet on the bench that reports output as it happens, offline if it has to.

FIT

Who it is for

- Small and mid-sized manufacturers whose plan and floor keep disagreeing
- Assembly, kitting and job-shop operations tired of MRP that runs monthly
- Producers who need bill versions frozen at release so the floor works to the right recipe
- Anyone who ran a spreadsheet next to their ERP because the spreadsheet was easier

APPS IN THIS PRODUCT

What you get

Manufacturing

Work orders and the job cards under them, bundles, the materials issued against them, and the people paid by the piece for them. Bills of material carry versions, effectivity and the release that pins what the floor will build.

Planning

Demand and forecasts, the master schedule per branch, the time-phased MRP run, planned orders with pegging, firming, exceptions and the production timeline.

Shop Floor

The operator terminal on a shared device: clock on by PIN, take the dispatch list for the bench, start and stop an operation, report output and downtime, offline if it has to be. There is also an andon board the floor reads from across the room.

Quality

Inspection plans and the inspection queue, holds, non-conformances, corrective actions, supplier quality and certificates.

Maintenance

Machines on the asset register, meters, preventive schedules, and requests and orders with parts and labour. A machine is an asset, so Maintenance and Rutba Facilities are two views of one work engine rather than two registers of the same things.

WHAT IT DOES

Capabilities

- Versioned bills of materials with effectivity, where-used and a change record
- Work centres with capacity, calendars, and a labour basis for costing
- A regenerative MRP run: nets on-hand and reserved, respects lead times, plans by lot policy
- Planned buy and make orders with pegging back to the demand that caused them
- Firming that survives the next run (supply, not plan)
- A work-order timeline and an exception list, so a planner has a picture and something to act on
- A shop-floor terminal with device pairing and an offline queue
- Stops reported with a reason code, driving an andon board the floor can read
- The floor works to the pinned bill version, so the bench and the plan cannot disagree
- Standard cost per version, computed from the bill, the routing and the work-centre rates
- Batch and lot traceability both ways, with recall
- A finite schedule with a freeze fence, and every plant side by side
- OEE per work centre, with throughput, on-time delivery and cost per unit

- Inspections, holds, non-conformances and corrective actions, with a gate that stops completion on a failed check
- A breakdown reported on the floor becomes a maintenance request

COMMERCIAL

Plans and pricing

PLAN	PRICE	INCLUDES
Starter	\$15 per user / month	Single-level BOMs with versions; Work orders; Material consumption; Basic costing
Growth	\$35 per user / month	Multi-level bills of materials with effectivity; MRP runs with pegging, firming and lot sizing; Work centres, calendars, and the master schedule; The shop-floor terminal, with device pairing and offline queue; Standard cost per version and variance reporting; Batch and lot traceability
Enterprise	Custom annual contract	Multi-plant planning; Machine integrations (on request); Custom costing models; Dedicated support

Prices are in US dollars and exclude local taxes. Every plan is billed through rutba.io/suites/manufacturing. Annual and multi-product pricing is available on request.

Worth knowing

All five apps are built: engineering data, work centres and calendars, the MRP run with pegging, firming and the timeline, the finite schedule and multi-plant view, the shop-floor terminal with downtime, the andon board and OEE, inspections and corrective actions, and maintenance on the asset register. Machine connections are not: output and downtime are reported from the terminal, not read from the machine. The cost rolls up onto the finished units; posting work in progress to the ledger is not built.

RUTBA SUITE

How it fits the rest of the suite

Rutba Suite is 23 products in three lines (the business suite, the workspace and the platform services underneath), sharing one customer list and one set of books. Buy the one you need today and add the rest later without a migration.
